

## Important specifications of Novin Net:

- Upload and download of all parameters and key situations by a master-slave connection to a PC via RS-232C serial port. Prepared RS-485 physical layer to make a network with a pre-programmed micro-controller based on MODBUS protocol.
- Supports 1200m distance without repeater.
- Event registering by T/C up to 6000 events before uploading.
- Warning of fault detection.
- Multi-lingual HMI.
- T/C Roll-call.
- Real time monitoring.
- Gun and T/C layout can be defined.
- Uploading and downloading of all parameters.
- Visualization of geometrical dimensions of electrodes.
- Auto-saving of all information in data-base files according to MS ACCESS application standards.
- Definition of T/C behavior during fault detection.
- Definition of user access level by administrator.
- Real time printing.
- Dynamic query.
- Making reports based on SQL commands, tables and graphs.
